Source: *The State of Working America 2004-05*, tables 2.11-2.13. Based on analysis of CPS wage data described in Appendix B.

The poverty level wage is calculated using the preliminary estimate of the four-person weighted average poverty threshold in 2003 divided by 2,080 hours and deflated by CPI-U-RS to obtain levels for other years. The threshold is available at the Census Web site.
